Experience

Fantasy Basketball International, Product Engineering Lead — May 2026 to present

- Lead engineering and product for a paid fantasy basketball platform with a community of 6,000+ managers, on a team of two: I design the features and build them end to end, from first commit in May 2026 to public launch that September. Authored 880+ of the repo's 1,000 merged pull requests in a 240,000-line TypeScript codebase.
- Built checkout and fulfilment for paid access. A signature-checked order webhook joins on the user id, never on email, grants the tier and the Discord role, and ends access on a refund.
- Wrote the entry-fee reconciliation job. Every 30 minutes it matches paid entrants to accounts on a ledger keyed by league and provider entry id, so a re-run cannot add anyone twice, and it sends ambiguous cases to a review queue.
- Keep production safe to change: 170+ SQL migrations applied to a fresh database in CI, 330+ unit test files, 27 Playwright specs, a secret scan on every pull request, and preview deployments on a read-only database role.
- Wrote the projection engine behind every ranking and trade verdict, run twice a day in eight isolated stages, with an admin page that traces any player through each stage, so any number on the board can be explained.
- Use AI agents (Claude Code, Codex) at every stage, from spec to code, tests and review, and hold their changes to the same gate as my own. In the product, the Claude API reads injury news, limited to bounded, cited adjustments.

RBC, Co-op, Global Functions Technology — May 2026 to August 2026

- Built automated reporting tools in Python on REST APIs: a ticket data dashboard and a self-updating change calendar.
- Automated content summarization with large language models (LLMs) across ServiceNow, Jive and Confluence.
- Delivered internal web applications in Python and a modern web stack, with frontends built to RBC brand standards.

RBC, Co-op, Financial Shared Services — May 2025 to August 2025

- Learned SAP on the job to manage the invoice lifecycle for RBC's U.S. business units through to payment.
- Cross-referenced vendor records, validated purchase orders and monitored payment statuses in SAP.

Torinit Technologies, Digital Solutions Intern — May 2024 to August 2024

- Built a proof of concept for a client's digital solution from design thinking sessions, and ran client prospecting in HubSpot.

Mirabella Development Corporation, Research and Development Intern — June 2023 to August 2023

- Researched industry trends, buyer preferences and competitive positioning, and ran cross-functional meetings.

Panther, Founder and Director of Operations — September 2021 to August 2023

- Founded a student events company, built it to more than $40,000 in revenue and directed its sales team.

Projects

Pride STEM Canada, Dalhousie course project for a non-profit client — October 2025 to present

- As Senior Developer, wrote the bulk of the code for a non-profit's bilingual conference website in Next.js and Supabase.
- Registration is paid through Stripe. I added its paid add-on and rebuilt the registration pages to the client's requests.
- Now Development Director: I lead the student team, run version control and documentation, and review and merge its code.

More projects, each with its screens and a write-up at lucasreydman.xyz: TPDL (dynasty league platform), GLUE Index (NBA player index), Fandex (franchise index), SHARPRFI and Hitlist (MLB betting models), Playcaller and Lineup Lab (fantasy football tools), PhantomGM (lineup autopilot, with my team) and Blakey Breakthrough (client dashboard).

Education

Dalhousie University, Bachelor of Applied Computer Science — Expected May 2027

3.94 GPA. Sexton Scholar and Dean's List. Entrance Community and Leadership Award. Bilingual in English and French.

Skills

Languages	TypeScript, JavaScript, Python, SQL, Java, HTML, CSS
Frameworks	React, Next.js, Node.js, Tailwind CSS, Vitest, Playwright, Jest, JUnit
Backend	PostgreSQL, Supabase, Redis, REST APIs, GraphQL, webhooks, OAuth, Stripe API, row-level security
Tools	Git, GitHub Actions, GitLab CI/CD, Vercel, Azure, SAP, ServiceNow, Jira, Confluence, Excel
AI tools	Claude Code, Codex, Grok, Cursor, GitHub Copilot, Claude API, MCP, prompt engineering
